Work on your inner core to initiate 'Learning 2.0'

Welcome to the June edition of the Schoolastic News magazine. We take pride in sharing this issue that purely focuses on bringing out student dynamism. Learning is not a process confined to schools and colleges only, nor does it end with the conclusion of one's school career. It is indeed a lifelong process.

Children gain skills and knowledge easily if we can make the environment stimulating and purposeful. The philosophy of Schoolastic News has always been meeting the needs of the individual child. This issue of the magazine brings out multifarious disciplines to nourish a child's holistic learning through a sustainable approach. It also highlights the essence of celebrating the World Environment Day every year on June 5. This issue highlights the belief that tiny but impactful actions/innovations are a key to a bright and sustainable future.

The reflection of the student's creativity and achievements is the epitome of the Schoolastic News. The inculcation of passion for creative thinking, writing and research among the students is one of the major objectives set by this magazine. We are reassured and we further encourage their spirit of discovery and exploration. The relaxing summer vacations amid such harsh heat waves multiplies the affect we ought to bring forth. It was Margaret Mead who once said, "Children must be taught how to think, not what to think". Thus the blooming thinkers and writers of this beautiful planet also say that there is ONLY ONE EARTH and let's together live on it, in harmony with its soil, flora and fauna.

We have also put forward a distinctive blend of offerings in the areas of knowledge, encouraging students for participating in Model United Nations and SDG campaigns as well as organizing and taking part in various educational events.

We thank Ms. Mamata Bhokare, Principal, Ideal Smart School, Miraj who enlightened us through her article on "How to Overcome Learning Deficiencies as Schools Reopen?".

Students and the editorial team have put forth their ideas and thoughts to make the magazine worth you. We trust that the following articles which the pupils across various schools of India have contributed, will bring much satisfaction and enjoyment to all our readers.

In the end, I will conclude with a very famous quote from our Father of the Nation Mahatma Gandhi who stated:

"Live as if you were to die tomorrow. Learn as if you were to live forever."

Happy Reading!

WORLD ENVIRONMENT DAY

ONLY ONE EARTH WORLD ENVIRONMENT DAY

World Environment Day is celebrated around 143 countries across the globe on 5th June every year. World Environment Day was instituted by the United Nations to minimize human interference with the environment. Environment day has been celebrated every year with a specific environmental theme. The first World Environment Day was held in 1974 with the theme "Only One Earth".

The environment is the most precious gift to humans by God. World Environment Day is observed worldwide to respect and be grateful for everything that the environment has given to humans and to take a pledge to protect it.

Why Do We Celebrate World Environment Day?

World Environment Day is celebrated to raise awareness about the environment and prevent it from further damage caused by human activities. The day also reminds us of various measures and steps to be taken to protect our environment.

Global Warming is the main cause that is impacting our environment. Thus, we must save and protect the environment and also should stop all types of exploitation activities that are destroying the environment. In the end, it is our basic need for survival and our generations ahead.

What do we do on World Environment Day?

On World Environment Day, we all should participate in various campaigns to spread awareness about Environmental protection. All the organizations of the world come together on an environmental day to take small steps to improve our future. Schools and offices encourage workers and students to plant trees or clean up the local area/surrounding. To improve the environmental conditions, government organizations and leaders come up together to fight the problems and thus help in saving our environment. Some of the steps taken by the government

include strict laws and reducing the use of plastics. If we plant more trees, it can curb pollution and help in saving the environment. Spreading awareness among people can also help in reducing pollution and thus protect the environment.

Conclusion

The idea behind World Environment Day is to create a beautiful world that is free of pollution and scarcity of natural resources. Banning plastic, planting more trees and plants, saving water, recycling, and saving wildlife and animals are some of the steps which lead to a better environment. We should protect natural resources and use them efficiently and carefully. Standing together we can create a beautiful and healthy environment.

WORLD ENVIRONMENT DAY

SAVE SOIL TO SAVE FLORA AND FAUNA

87% of life forms – microbes, worms, insects, birds, animals, human beings, plants, trees, and every other vegetation on the planet are sustained by an average of 39 inches of topsoil. And that is in grave danger right now. In the last 40 years, 40% of the world's topsoil has been lost. The United Nations says we have soil left only for approximately 80 to 100 harvests, which means another 45 to 60 years of agriculture. After that, we will not have the soil to produce food. You can imagine the suffering that we will unfold in the world. 30% of India's land is already degraded, and 90% of India's states are seeing soil turn to desert. That means nothing can be cultivated there. So, protecting the soil for the future generations of this land is the most important thing.

In India, people have been tilling the same land for thousands of generations. But in the last generation, the soil quality

has become so poor that it is on the verge of becoming a desert. If you want to preserve the soil, it means organic content has to go into it. If there are no leaves or animal waste, you cannot put back anything. This is simple wisdom that every farming family knew. They knew how many animals and trees you must have on a certain amount of land.

There is a national aspiration in India which has already been set by the old Planning Commission that 33% of India should be under the shade because if you want to preserve the soil, that is the only way. If you own one hectare of land, you must compulsorily have a minimum of five bovine animals on the land. There is one fantastic thing about this land for which we have scientific data but no scientific reasoning yet. If you go to a place in this country where the soil is good and take one cubic meter of this soil, it is said that there are

approximately 10,000 species of life in that one cubic meter. This is the highest concentration of life found anywhere on this planet. We do not know why. So, this soil just needs a little support. If we give it that little support, it will bounce back quickly.

We cannot keep the soil rich with fertilizer and a tractor. We need animals on the land. Right from ancient times, when we grew crops, we only took the crop and the rest of the plant and animal waste always went back into the soil. We seem to have lost that wisdom. Thus, we can save soil, flora, and fauna all by following this wise saying.

EDUCATION

BENEFITS OF READING BOOKS REGULARLY

Reading is an excellent habit to cultivate throughout one's life. Good books may educate, inform, and correctly guide you. There is nothing like a nice book to keep you company. Reading is beneficial to your entire health and well-being. You enter a whole other universe once you begin reading. When you develop a passion for reading, you will get hooked on it. Reading improves vocabulary and linguistic abilities. Reading books is another method to unwind and de-stress. It is essential to read a decent book for at least a few minutes each day to stretch the brain muscles and keep them healthy.

Books are truly your best friends since they can be relied on when you are bored, sad, depressed, lonely, or irritated. They will be there for you whenever you need them and will brighten your day. They are always willing to share information and knowledge with you. Reading aids in the development of optimistic thinking. Reading is beneficial since it expands your mind and provides you with a wealth of information and life lessons. It allows you to have a deeper understanding of the world around you. It stimulates your creativity and keeps your mind busy.

Reading expands your vocabulary and helps you communicate more effectively. It teaches you how to express yourself

creatively with your language. It not only improves your communication skills but also helps you become a better writer. In every element of life, effective communication is critical. Cultures, customs, arts, history, geography

health, psychology, and a variety of other themes and facets of life can all be explored via books. Books provide an incredible quantity of knowledge and information.

Reading a good book transport you to another planet and helps you escape the stresses of everyday life.

It has several beneficial impacts on your mind, body, and spirit. It maintains your brain healthy and robust by stimulating your brain muscles. Reading transports you to a realm of imagination and encourages you to be more creative. Reading allows you to look at life from several angles. Reading books allows you to develop fresh and innovative ideas, pictures, and views in your head. It encourages you to be imaginative, dream, and think imaginatively.

You may learn about many different elements of life by engaging in active reading. It entails challenging what you've read. It aids in the development of your ideas and the expression of your viewpoints. Active reading generates new ideas and concepts in your head. It stimulates and strengthens your brain while also providing you with a fresh viewpoint. One of the finest talents a person may have is the ability to read. There's a reason why books are considered your closest friend. As a result, cultivating a solid reading habit is critical. To get the benefits of reading, we must all read for at least 30 minutes every day. Sitting in a peaceful area and reading is a wonderful experience. The greatest pleasurable experience one can have is reading an excellent book..

ROLE OF TEAM WORK AND COLLABORATIVE LEARNING IN CAREER

Collaborative learning involves working as a group to solve a problem or understand an idea. While often implemented in the classroom, many companies also use collaborative learning to help professionals learn and remember important skills and concepts. In this article, we describe this learning style and the benefits of collaborative learning in the workplace.

Collaborative learning allows professionals to complete projects and learn new concepts while also developing social, teamwork, and communication skills. Collaborative learning can be done in person—such as with a group of students in a classroom—or computer-based through online platforms.

The following are 5 benefits of collaborative learning:

- Improves problem-solving skills**
 Collaborative learning projects often require groups to complete a task or solve a problem. In the process, participants get to hear a variety of possible solutions from people with different opinions and perspectives. People might provide unique ideas their teammates would not have thought of. The group must then discuss and analyze each one to find the best solution. Working through a problem or an assignment as a group can help people develop their problem-solving skills or discover new ways to handle different types of situations at work.
- Improves communication skills**
 Collaborative learning depends on communicating effectively to complete a task. Participants use their verbal

communication skills to share ideas, explain concepts and provide feedback in clear and concise ways. They might also use written communication skills if the assignment involves tasks such as group writing or peer editing. The more people practice their communication skills in these types of settings, the stronger they tend to become.

- Inspires creativity**
 Combining different views and ideas can result in creative solutions to collaborative learning assignments. One individual's idea or suggestion might inspire a new and creative idea from their team members. Collaborative learning encourages this type of creative thinking because it blends perspectives and personality types.
- Improves confidence**
 When working as a group, team members help support each other as they move toward a common goal. Collaborative learning can be

particularly beneficial for individuals who are shy, anxious, or introverted. A supportive group atmosphere can help them build confidence. Team members can encourage them to share their opinions and contribute to discussions. As a result, their confidence may grow as they realize their value to the group.

- Develops critical-thinking skills**
 Collaborative learning can encourage participants to think at a high level. They must analyze and discuss information to come to the best decision or solve a problem. By having to explain their ideas and interpret and assess the ideas of others, people can improve their critical-thinking skills. Critical thinking is important for resolving conflicts, creating ideas, and making sure projects get completed smoothly and efficiently.

FAIRGAZE MODEL UNITED NATIONS

(NORTH INDIA REGION)

23RD APRIL 2022 | 9:00 A.M. – 6.00 P.M.

20+ SCHOOLS PARTICIPATED

6 COMMITTEES

Some Happy Voices:

It was a great opportunity for children to learn and try to speak up and develop skills in public speaking. FairGaze MUNs provide children a platform where they could develop and enhance these skills and have good teamwork and leadership opportunities as well.

Thanks,

Rashmi Tewari
(Sampada's Mother)

(Sampada served as the Delegate of Italy in the United Nations Security Council and is also a student of RAN Public School)

It was a privilege to be invited as Guest of Honour for the MUN organized by UNIC And FairGaze North Sector. The event was very well organized. Crisp, well planned, and extremely thoughtfully put together. The event helped students to come forward with their thoughts and ideas and present them to work towards peace and harmony in the world. Model United Nations or MUN as it is called creates a sense of awareness and responsibility in the youth. I congratulate all the members of FairGaze for this endeavor and wish them good luck for the future

Regards

Ms. Malini Bindra
Cambridge Coordinator, Kulachi Hansraj Model School, Delhi
Guest of Honour – Opening Ceremony – FairGaze MUN (North India Region)

The MUN was a great experience, I absolutely loved it, however, I wish it was more than just a day long. I have learned a lot.

Sincerely,

Trisha (Delegate of USA in United Nations Children's Fund)
(Class – 10 student of Step by Step School)

It has been a wonderful journey alongside FairGaze MUN for me.

The various opportunities provided to me have helped me develop a skillset that will certainly aid me in my future endeavors.

I have been able to meet and connect with other experienced delegates and it has an enlightening experience for me to lead MUNs and teach others. It gives me honour to be part of this.

Thank you.

Vipul Mittal
(Secretary General – FairGaze Model United Nations for Northern India Region)

The School Membership Program helps the school instill experiential learning, holistic development, skill building and financial literacy in children further preparing them for their life after school.

Recent FairGaze Engagements

FairGaze in association with Sesame Workshop India, is organizing a student-led, Sustainable Development Goal (SDG) campaign to commemorate World Environment Day. The campaign encourages young students to share their tiny but impactful action stories, towards environment conservation. This is a free campaign. The top 25 video stories will be selected for a virtual interaction with the iconic muppet 'Chamki' of Gali Gali Sim Sim fame. Chamki, a bright, exuberant 5-year-old asks a lot of questions. She is constantly coming up with fresh, large ideas and wants to give them a "Chamki twist" to make them even more enjoyable.

So gear up students! Send us your 'environment conservation' stories and you might get an opportunity to meet the very famous 'Chamki'.

#environmentday #lifeonland

- **May 2:** Time Management
- **May 6:** Childhood Innocence Leading To Gullible Adults
- **May 11:** Floral Painting on Newspaper
- **May 16:** Healthy Lifestyle
- **May 25:** Each Day Is Earth Day

FairGaze in partnership with Super Teacher Academy organized a teacher's workshop on 28th May – Decoding Parent-Teacher Communication. The workshop aimed to better facilitate a child's progress through effective collaboration between teachers and parents.. The speaker of the workshop was Ms. Swarleen Kaur who is a TEDx Speaker, Author, and Educator and she has 11 years training experience.

FUTURE LIFE SKILLS

SWIMMING: ESSENTIAL LIFE SKILL

Swimming is an important skill and it can also be tons of fun. It has been called the perfect exercise. After all, you can get all of the benefits of an aerobic workout without any damaging impact on joints, and it can be done by both the very old and the very young.

It is utilized by athletes to stay strong and keep fit when recovering from injury, and there is no fancy equipment needed—just you and the deep blue.

Swimming has many more benefits than those obvious advantages seen on the surface; its improvements to overall health go much deeper. It can help lower blood pressure and builds cardiovascular strength. Swimming is an ideal exercise for people with disabilities like paraplegia can eliminate some workout options for them but swimming water provides resistance and support to them. It was found that swimming three times per week improved glucose (sugar) control and insulin sensitivity. It could decrease heart disease risk. It is a great way to manage stress as well because such aerobic activities elevate and stabilize

mood and reduce tension overall. And for those who find difficulty in sleeping, swimming is one of the best medicines for that.

Apart from the health benefits that swimming provides us, it also teaches us some very important life lessons. It teaches us to set goals and do everything in our power to get ourselves there. Without this motivation, none of us would ever be successful. This motivation

“Gliding through water gives you a sense of freedom”

and drive to succeed will stay with us for the rest of our lives, both in and out of the pool.

Swimming teaches us how to succeed and be happy with ourselves, but more importantly, it teaches us how to deal with heartbreak and disappointment. Sadly, it is extremely common to hear about the swimmer who did everything

right and could not achieve their goals. It happens to most of us at some point and it is devastating. Swimming allows us to learn to deal with these moments and not let them deter us from success in the future. Overcoming adversity is one of the hardest lessons that we face in life. Swimming exposes us to a large amount of adversity early in life. It shows us how to take control of ourselves and let each setback make us stronger.

Swimming is not only a sport; it is a lifestyle. The life that we lead prepares us for our future and brings us perspective. The lessons that we learn from swimming will follow us through life. Some of these lessons are difficult to handle, but in the end, they make us stronger swimmers and more importantly stronger people.

FUTURE LIFE SKILLS

BEST FIVE WAYS TO IMPROVE DECISION MAKING SKILLS

Decision-making is about choosing the best choice from available options. Because it is to settle on the best option, it's not that easy to spot which option is best and which isn't. Thus, it is important to enhance and improve our decision-making skills. It requires exercising judgment and creativity depending upon the character of the matter, situation, the need of the solver, opportunities, culture, resources availability, etc. It also must be based on education, experience, also as knowledge of things.

Here are five ways of improving decision-making skills-

- **Effectively Analyze the Situation**
The primary step to reinforce and improve decision-making skills is through effective analysis of situations that will affect your decisions. If the rational decision-making model doesn't seem to fit that situation it's not necessary to suit that model. Adjusting the arithmetic mean and probabilities respecting the belonging organizational cultures, rules and regulations is necessary.

- **Be Aware of Bias**
Prejudice regarding race, ethnicity, minority group, and females may be a critical issue in recent times. It should be avoided. Emotional intelligence is vital. There are four ways to scale back biases and errors while improving decision-making - Focus on Goals, look for Information that disconfirms your beliefs, Don't Try to Create Meaning Out of Random Events, and Increase Your Options

“Decision-making is about choosing the best choice from available options.”

- **Combine Rational Analysis with Intuition**
Improving decision-making skills needs both rational analysis and intuitive calculation, to form a good and effective decision. Thus, intuition allows us to draw on our vast storehouse of unconscious knowledge. Experienced decision-makers can sense the simplest solution without

consciously brooding about it. However, one should recognize perceptual distortions and false assumptions, and therefore the value of intuition in making effective and sound decisions.

- **Don't Assume That Your Specific Decision Style Is Appropriate for Every Job**

Recognizing problems and opportunities appropriate for each job is challenging. Effective decision making involves perceptual, diagnostic awareness of the issues. The sense of complex information in the work involved will increase decision ability. Some job needs quick action which needs the directive sort of action and thinking, for instance, stockbrokers need a fast decision. Likewise, accountants, market researchers, and financial analysts need the analytic style for simpler and more effective decisions.

- **Try to Enhance Your Creativity**

Creativity refers to the ideas that make a pro-social, novel contribution. It encourages uniquely reframing the matter and generating different approaches to the matter. Creativity flourishes when employees are given away empowerment, autonomy in thinking, freedom, and responsibility to decide on the way to accomplish tasks and solve problems. External pressure, lack of feedback, etc. may break down creativity.

HOW TO OVERCOME ◀ LEARNING DEFICIENCIES ▶ AS SCHOOLS REOPEN?

As adults, we all have different needs and different abilities. For children, it is the same. Some children can deal well with the challenges. But others, may not. After the pandemic, all schools are facing numerous struggles set in front of them. Like some children have returned to school having experienced a high level of stress, anxiety, isolation, and grief. Some have experienced increased violence at home. While nearly all have returned with a lowered level of learning ability.

School teachers need to play a crucial role in supporting children's transition back to physical classroom learning, particularly after an extended period of school closure. In addition to continuing to use the different skills during classroom teaching, teachers have to ensure that their students' emotional well-being is also taken care of.

In searching for ways to help children with learning disabilities, we need to consider ways to help them help themselves. Our job as a teacher is not to "cure" the learning disability, but to give the child the tools they need to work through challenges. In the long run, facing and overcoming a challenge such as a learning disability can help the child grow stronger.

A good attitude will not only help solve the problems associated with a learning disability, but also it can give the child hope and confidence that things can improve.

By following a few techniques and classrooms habits we can ensure to overcome the barrier of learning difficulties faced by the students:

- **Identify Learning Styles**

Children have unique learning styles which can be identified by the following-

- Auditory learner- who learns best by listening
- Kinesthetic learner- who learns best by engaging in a movement like art and craft, sports and games
- Visual learner- who learns best through visual aids.
- **The use of Assistive Technology (AT)**
Children with learning deficiencies can make use of assistive technologies like audiobooks, software programs for Math and English, graphic organizer tools, tape recorders, etc. These technologies will help students cope with challenges as well as ensure independent learning.
- **Positive Encouragement**
Concentrate on efforts, not on results. Usually, we all give more emphasis on the results rather than efforts. We must appreciate the efforts taken by the child; results will gradually improve. We all know that positive encouragement can create miracles.
- **Boosting Confidence**
Concentrate on strengths rather than weaknesses. The child may have learning difficulties as its weakness, but at the same time may possess a few strengths too. Focus on enhancing their strengths to boost their confidence. A child with learning difficulties needs a lot of confidence to stand out in society. We can always help them by giving positive reinforcement.
- **Dealing with obstacles**
Teach the child how to overcome the obstacles without getting

overwhelmed or discouraged. Tell them that we as adults and even his/her friend face challenges in their day-to-day life. Even though the severity of the obstacles faced might be more, they can surely succeed in their life.

- **Regular motivation**

Monitor child's emotional state and motivate them to do better. After the pandemic, dealing with the ever deteriorating emotional and mental status of all children has become a complex task. As a teacher, we can communicate with the child and develop a good rapport, so that the child can approach you whenever and as needed. Children also need to take ownership, responsibility, and accountability for their work. They also need to be open and develop understanding and acceptance when things do not turn out as planned. For E.g., children can try learning a new concept, read a new text independently or learn one new spelling every day.

- **Encourage Creativity**

Give creative alternative solutions. We frequently point out the deficiencies possessed by the child. We seldom talk about filling those. Creative solutions and teaching techniques should be a part of the daily teaching and learning process. These may include using activities, hands-on experiments, play way methods, role plays, and allotting simple tasks. This will result in higher engagement in the daily learning process for kids.

- **Divide into Smaller Parts**

Let the child learn complicated concepts in parts, don't push to learn

at a stretch. Some concepts can drain the understanding capacity of the child. When taught at a stretch, these kids fail to understand such concepts. Consequently, they fail to analyze and implement those concepts during assessments. We can divide such concepts into smaller and simpler ways and allow the child to absorb them at his/her own pace. Repetitive exercise can give better results.

Teachers should help children set short term and long-term realistic and attainable goals. Timely feedback can be given on the status of the child's progress while the child can reflect and ask for help if needed. e.g. goal of the day, week, month, and year can be outlined.

- **Give Short but Clear Instructions**

Too many instructions can further worsen the situation for the child with learning difficulties. The teaching and learning process involves a lot many instructions to be given. Research has proved that the best class is made up of short, crisp, and effective instructions. Long and difficult to understand instructions will not only lessen the interest of a child but also will demotivate him/her to attend the class.

- **Most Important**

Have a constructive plan. Planning your subject, the period can reduce the

complications faced by both sides. Since ages, teachers are advised to plan their class well in advance and as per the requirement of the subject and considering the age group of children. While planning the lesson, we must include quick group activities and brainstorming sessions. This may help the teacher to understand the gaps within the class. It will further help to create remedial lessons.

- **Implement the Plan**

All said and not done, won't take us anywhere. Implementing the planned lesson is the most crucial and fruitful step. Efforts taken by a teacher will be useful to children only when proper implementation takes place.

Your child is not defined by their learning disability. A learning disability represents one area of weakness, but there are many more areas of strength. Focus on your child's gifts and talents. Your child's life and schedule shouldn't revolve around the learning disability. Nurture the activities where they excel, and make plenty of time for them.

Let us not forget, that every child is gifted, we need to explore and enhance those abilities and be supportive of them. This in turn will help the child to avoid many complications and unpleasant situations at school and in society.

Children should be exposed to dynamic personalities who have also faced learning difficulties. Watching their videos or reading up on their biographies, success stories, and life journeys can be inspiring. Motivational and social stories should also be made part of everyday learning. Famous scientists, singers, politicians, and celebrities have faced learning difficulties. Some of them are Albert Einstein, Walt Disney, Steve Jobs, Daniel Radcliffe, Hrithik Roshan, and Abhishek Bachchan.

Help the Children to recall and revisit their past success stories. They need to celebrate the goals and milestones achieved along the way.

Nurturing and developing good relationships in the classroom and in everyday life is vital. Following the right values and engaging in problem-solving skills will help them make good choices. Being open-minded, balanced, and flexible can help them work through challenges in academics and everyday life. Students need to believe in their potential and unique capabilities which is their superpower.

Some Happy Voices:

Hi, I would like to express my gratitude to all. It was great experience of my daughter. She built her confidence, speaking skills, leadership quality, and writing skills. Thanks MUN for giving this platform to the children. I am very thankful to all those who arranged such type of program.

Regards: Smita Chandrika Padhy (Srusti Sikha 's Mother)

(Srusti served as the Delegate of India in United Nations General Assembly and also a student of Our Lady of Fatima Convent Secondary School)

I was so glad to be a part of FairGaze MUN that was conducted for Eastern region. I was happy to see the young delegates enjoying on the learning ground aptly created by FairGaze. The organisation is doing well for all the students and would love to continue our relationship with them.

Regards- Dr. Kunwar Arun Singh
Director, Sunbeam School Ballia

Chief Guest – Closing Ceremony – FairGaze MUN (East & North - East India Region)

Thank you FairGaze for your support. Never thought that I would get the recognition for best position paper and it is possible only because of your one day before boost up call.

Sincerely,

Purnima (Delegate of Denmark in United Nations Human Rights Council)

(Student in Class 12, Sri Sri Suryadeo Singh Smriti Gurukulam School)

FairGaze MUN was inclusive of first timers, even those who were as young as in 8th grade and they made sure to coordinate efforts with the Secretariat and Executive Board to ensure a smooth run. Their cohesive website also aided delegates for their research. I appreciate the willingness to entertain questions from delegates and the flexibility allowed for all the Chairs. I had a great time as Chairperson and while training enthusiastic delegates, too.

Regards - Ananya Sahoo (Chairperson of United Nations Environment Assembly)

(Student in Class 10, Phoenix Greens School of Learning, Hyderabad)
